Memo to File:

RE: Frank M. Mine
ACT/017/017
Plateau Resources

On June 20, 1979 and June 21, 1979, Ron Daniels and Mary Ann Wright made an initial inspection of this proposed mine site. Ms. Pam Newman, Mr. Fred Gerdeman and an engineer accompanied us to the mine site.

The area of proposed surface disturbance was outlined by Plateau Resources personnel and the stake marking the planned origin to the incline portal was noted. The watershed area for the proposed waste dump canyon fill area was field verified to the Division's satisfaction as were the vegetation and percent cover of the area.

Concerns for stability and reclamation of the waste dump were expressed and further submittals were requested verbally and by letter (June 25, 1979). Archeological and endangered species concerns were expressed also. In answer, Plateau Resources submitted the results of an archeological survey done for the area and the results of a survey done for the area to determine the presence of endangered species. Proof of the archeological survey and the results of the endangered species survey are included in the file.

Plans for test plots and topsoil stabilization were discussed and definite plans are forthcoming.

MARY ANN WRIGHT *MAW*
RECLAMATION BIOLOGIST
